S U S T A I N A B I L I T Y

COMFORT AND SUSTAINABILITY ABIII:

therefore creating cross ventilation that facilitates the ventilation of the properties, thus achieving natural freshness in summer and therefore providing significant savings in air conditioning. In addition, thanks to the south orientation of the properties, excellent thermal comfort is achieved in winter, saving heating during this time of year. If we add to all this the use of aerothermal energy for domestic hot water, this leads us to the use of renewable energies in all the homes. All this, together with the high quality of the insulation used in the homes, together with the aluminium carpentry and glazing used, optimise thermal comfort, thanks to which it will hardly be necessary to use electricity in order to achieve comfort inside the home.

H I G H L I G H T S A B I I I

1. Fully equipped kitchen, including electrical appliances.
